**The largest international exhibition in Asia for the complete water cycle: process water, drinking & waste water and water management,**

3-5 June 2019, Shanghai

Water and environment: inextricably connected

Growing prosperity comes with the challenge to provide 20% of world's population with fresh, high quality water. This requires advanced treatment technologies. With only 6% of global freshwater resources and stronger policies favouring the environment Chinese utilities and industries are eager to embrace new technologies. Specifically innovative solutions in waste water treatment technologies, reuse technologies, sludge management and decentralised WWT. Next to that, targets regarding reduction of water leakage encourage the application of smart water solutions.

The consequences of climate change confront China with droughts and flooding. Subsequently there is great interest in water management solutions like resilient cities (rainproof design), circular economy (desalination and reuse) and water conservancy. Environmental policies are a great driver in the search for innovative technologies in water treatment.

Aquatech China is the leading water technology trade show in China, It is the only trade show in China focussing entirely on water. After 11 editions the show now attracts in 1,800+ exhibitors and 80,000+ professionals. The show is organised by RAI Amsterdam (Aquatech Global Events) and its local partner CHC. As part of the week of environmental technology the show is co-located with the specialised shows EcoTech Air, Ecotech Waste, Buildex and Flowtech.

Join the Holland Pavilion

The **Holland Pavilion** is a very efficient way for companies to join Aquatech China 2019. Whether you are considering to enter the Chinese market or already in business, by joining the pavilion you benefit from everything Aquatech China has to offer in a very effective way: maximum visibility upfront and during the show, ready-to-occupy stand space, EU-China match making program, the experience of RAI/Aquatech and friendly costs.

Additional visits to Nanjing, Wuhan and Chongqing.

In combination with participation in the Holland Pavilion, companies are invited to join a 4-day business trip inland; Along the Yangtze river to the cities of Nanjing, Wuhan and Chongqing. These so called 'second tier' cities are less well known internationally thus offering multiple opportunities for companies in water technology and water management. The 4-days trip is organised in cooperation with the Consulate of Chongqing and the NBSO's of Nanjing and Wuhan. Estimated costs for travel&stay ca. € 1950,-.
